Starting with CSS

Assignment

1. Create a web page with an inline style that sets the background color of the page to blue.

2. Create a web page with a heading and paragraph with information about CSS. Using internal CSS set the text color of the page to red and the background color of the paragraph to yellow.

3. Create a web page with 5 a tag similar to a navigation bar. Each link should change to a different color when it is hovered over.

4. Create a web page with a list of tech stacks involved in full-stack web development where the even-numbered items have a different background color than the odd-numbered items.

5. Create a web page with an image that is hidden until it is hovered over. Use a heading above the image that says hover below to reveal a surprise.

6. Create a web page with a form where the input field has a yellow background color when it is focused on.

7. Create a web page with a background image that covers the entire screen.

8. Create an about us web page with the heading "About Us" and paragraph text about "PW SKills". Use the class selector to style the heading with a blue color and the id selector to style the paragraph text with a green color.

9. Create a web page with a registration form, using the CSS attribute selector change the text color of each input field to any other color.

10. Create a simple webpage with the heading "PW Skills" and a paragraph of information. Using external CSS change the web page background color to any of the dark mode colors and change the colors of the heading and paragraph to make it visible and good-looking.
